

A challenge to learn QUALITY

Scheduler. *Parte 2 – Complejidad media*

Congratulations! you have passed the first challenge; this is the second part of the exercise. The client, after having worked for a while with the first development, wants to make some changes. It proposes to include a new control to manage the hourly frequency on each day, **this option would only be active if the daily setting is not Eleven.**

Daily Frequency

☐ Occurs once at 0:00:00

☒ Occurs every 2 Hours

Starting at 4:00:00 End at 8:00:00

This configuration alters the way the development of the first part works. **The combo that displays the hours** can have three values: **(hours, minutes, and seconds).**

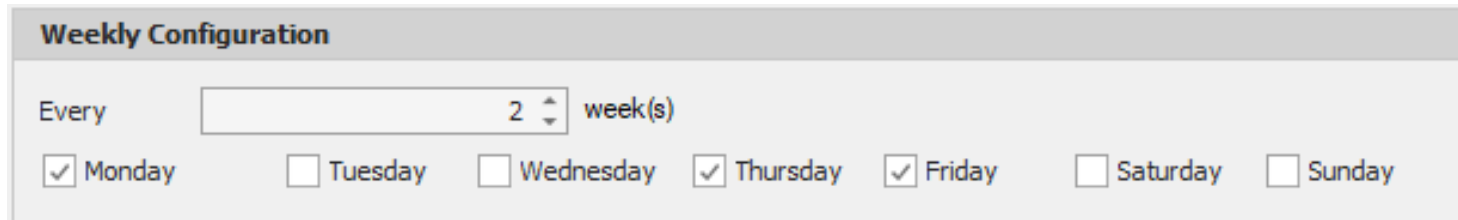

So, if we had **a recurring daily frequency of 2 days**, according to the current values the output should be something like:

01/01/2020 4:00,
01/01/2020 6:00,
01/01/2020 8:00,
03/01/2020 4:00,
03/01/2020 6:00, and so on.

A challenge to learn QUALITY

You can test it using Microsoft Outlook Calendar or Microsoft Mail set up different appointments.

In addition to this, he would like to incorporate a new section for weekly management:

Weekly Configuration

Every week(s)

☒ Monday ☐ Tuesday ☐ Wednesday ☒ Thursday ☒ Friday ☐ Saturday ☐ Sunday

In this example, the resulting dates would be every two weeks on Mondays, Thursdays and Fridays, and the **client wants to join it to the previous module regarding the daily frequency or (Daily Frequency).**

Taking into account these two cases and starting from 01/01/2020 as the initial date and that the daily frequency would be every 2 hours from 4:00-8:00, the departure would be something like:

*02/01/2020 04:00 (the closest Thursday of the current week to where we are),
02/01/2020 06:00,
02/01/2020 08:00,*

*03/01/2020 04:00 (the closest Friday of the current week where we are),
03/01/2020 06:00,
03/01/2020 08:00,*

A challenge to learn QUALITY

From here the date varies by 2 additional weeks, so we would find the following values:

*01/13/2020 04:00 (Monday),
01-13-2020 06:00,
01/13/2020 08:00,*

*01/16/2020 04:00 (Thursday),
01/16/2020 06:00,
01-16-2020 08:00,*

*01/17/2020 04:00 (Friday),
17/01/2020 06:00,
01-17-2020 08:00,*

+ 2 weeks

As you can see, the problem starts to get complicated, (**Remember, the client has not yet chosen the platform on which it will work**). At this point the difficult part begins, think it through before continuing, refactor the above if you see it necessary, ask me if you have any questions, I am here to help you.

A challenge to learn QUALITY

The form is just for you to see the complete configuration with the new requirements. It would be something like:

The screenshot shows a 'Schedule' configuration window with the following sections:

- Input**: 'Current date' is 01/01/2020 0:00. A 'Calculate next date' button is present.
- Configuration**: 'Type' is set to 'Recurring' (dropdown), 'Enabled' is checked, 'Once time at' is empty, and 'Occurs' is set to 'Weekly' (dropdown).
- Weekly Configuration**: 'Every' is 2 week(s). Days checked are Monday, Thursday, and Friday. Tuesday, Wednesday, Saturday, and Sunday are unchecked.
- Daily Frequency**: 'Occurs once at' is 0:00:00 (unchecked). 'Occurs every' is 2 Hours (checked). 'Starting at' is 4:00:00 and 'End at' is 8:00:00.
- Limits**: 'Start date' is 01/01/2020. 'End date' is empty.
- Output**: 'Next execution time' is 02/01/2020 4:00 am. The 'Description' is 'Occurs every 2 weeks on monday, thursday and friday every 2 hours between 4:00 am and 8:00 am starting on 01/01/2020'.

Courage!!!
