

A challenge to learn Quality

Scheduler. *Part 3 – High Complexity*

This is the third part of the exercise, the client proposes to go one step further, this time it has occurred to him to solve the cases that still remain. To this end, it proposes the following configuration regarding the monthly distribution:

Monthly Configuration

☐ Day 8 Every 3 month(s)

☒ The First Thursday Of every 3 month(s)

The frequency field can contain the following values (**First, Second, Third, Fourth, Last**).

The second field that displays 'Thursday' can contain the following values:

Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, day, weekday, weekend day

Being day any day of the week

Weekday (weekdays, Monday, Tuesday, Wednesday, Thursday and Friday)

Weekend day (weekends, Saturdays and Sundays)

Remember that the daily frequency will also be taken into account.

Input

Current date: 01/04/2020 4:18 Calculate next date

Configuration

Type: Recurring ☒ Enabled

Once time at:

Ocurs: Monthly

Monthly Configuration

☐ Day 8 Every 3 month(s)

☒ The First Thursday Of every 3 month(s)

Daily Frequency

☐ Ours once at 0:00:00

☒ Ours every 1 Hours

Starting at 3:00:00 End at 6:00:00

Limits

Start date: 01/01/2020 End date:

Output

Next execution time: 01/02/2020 3:00 am

Description: Occurs the first thursday of very 3 months every 1 hour between 3:00 am and 6:00 am starting on 01/01/2020

A challenge to learn Quality

Example: If we start from the start date '01/01/2020', the first departure would be 02/01/2020 3:00 am because it is the first Thursday within the current week.

The full sequence would look something like:

02/01/2020 3:00,
02/01/2020 4:00,
02/01/2020 5:00,
02/01/2020 6:00,

At this point I would add 3 more months and continue with the daily setup

02/04/2020 3:00,
02/04/2020 5:00,
02/04/2020 6:00,
02/07/2020 4:00

and so on.

A challenge to learn Quality

Example: Based on the second Weekend day starting from the start date '01/01/2020', the first departure would be 05/01/2020 3:00 am because it is the second day of the weekend (Sunday) within January.

The full sequence would look something like:

05/01/2020 3:00,
05/01/2020 4:00,
05/01/2020 5:00,
05/01/2020 6:00,

From here we would jump to the second weekend day of February.

02/02/2020 3:00,
02/02/2020 4:00,
02/02/2020 5:00,
02/02/2020 6:00,

From here we would jump to the second weekend day of March.

07/03/2020 3:00,
07/03/2020 4:00,
07/03/2020 5:00,
07/03/2020 6:00,

Can our client come up with anything else?
